Federal Statistical Research Data Centers

INSIDE THIS ISSUE

- 1 FSRDC
- 2 Annual FSRDC Conference
- 3 New Data
- 4 Active and Approved Projects

The US Census Bureau in partnership with federal statistical agencies and leading research institutions is pleased to announce that the Interagency Council on Statistical Policy approved the rebranding of the Census RDCs as the Federal Statistical Research Data Center program in January 2015. The FSRDCs will be managed by the Census Bureau and housed in the same secure facilities. This is an exciting time as the rebranding marks the beginning of the addition of new non-public data from a variety of federal partners.

Additional information can be found on the FSRDC website:

<http://www.census.gov/fsrdc>

2015 Federal Statistical Research Data Center Annual Conference

The 2015 FSRDC Annual Conference will be held at the Li Ka Shing Conference Center at Stanford University on Friday, September 18, 2015. The 2015 Conference will be hosted by Stanford University and the University of California, Berkeley. The one-day program will showcase research from the nationwide network of RDCs.

Call for Papers

The Federal Statistical Research Data Centers (RDC) at Stanford and Berkeley are welcoming proposals to present papers at the 2015 Federal Statistical Research Data Center Annual Conference. The conference will include a day of concurrent paper sessions and a keynote presentation. Papers should be based on current research using data from the nationwide network of RDCs. Data for the research include demographic, business, and linked employee-employer data from the U.S. Census Bureau and health data from the National Center for Health Statistics and

“The Federal Statistical Research Data Centers (RDC) at Stanford and Berkeley are welcoming proposals to present papers at the 2015 Federal Statistical Research Data Center Annual Conference. The conference will be a day of concurrent paper sessions and a keynote presentation.”

New Data and Data Updates in the RDC

2010 Manufacturing Energy Consumption Survey (MECS)

- The Energy Information Administration (EIA) of Department of Energy sponsors the MECS to provide detailed data on energy consumption in the manufacturing sector. The MECS provides statistics on the consumption of electricity and other types of fuel. It also provides data on the capability of manufacturers to substitute alternative fuels, end uses, the extent to which energy-related technologies are being used by manufacturers, and other related topics.

Current Population Survey (CPS) 2006-2012 Voting and Registration Supplement

- The CPS is a monthly labor force survey of about 70,000 households conducted by the Census Bureau for the Bureau of Labor Statistics. Every other year, after answering the labor force questions, the same households are asked a series of questions (the Voting and Registration Supplement) about the voting behavior of citizens aged 18 and up. Voting and registration data have been collected by the CPS every other year since 1994.

Current Population Survey (CPS) July 2011 to April 2014 (basic) monthly microdata files

- The CPS is a monthly labor force survey of about 70,000 households. The CPS is sponsored jointly by the U.S. Census Bureau and the U.S. Bureau of Labor Statistics, is the primary source of labor force statistics for the population of the United States.

2014 Current Population Survey (CPS) March Supplement

- Otherwise known as the Annual Social and Economic (ASEC) Supplement. This addition extends the coverage of this survey in the RDCs from 1967 to 2014.

National Survey of College Graduates (NSCG) 2010

- The NSCG is a longitudinal biennial survey conducted since the 1970s that provides data on the nation's college graduates, with particular focus on those in the science and engineering workforce. The survey samples individuals who are living in the United States during the survey reference week, have at least a bachelor's degree, and are under the age of 76. This survey is a unique source for examining various characteristics of college-educated individuals, including occupation, work activities, salary, the relationship of degree field and occupation, and demographic information.

FSRDC Conference from page 1

the Agency for Healthcare Research and Quality. The research should involve statistical analyses on nonpublic versions of the data from these government agencies.

Deadline for submitting papers is June 19, 2015.

For more information, please visit the Conference website:

New Data and Data Updates in the RDC

2011 NCVS Public-Police Contact Survey

- The Police-Public Contact Survey (PPCS) provides detailed information on the characteristics of persons who had some type of contact with police during the year, including those who contacted the police to report a crime or were pulled over in a traffic stop. The PPCS interviews a nationally representative sample of residents age 16 or older as a supplement to the National Crime Victimization Survey. The survey enables Bureau of Justice Statistics (BJS) to examine the perceptions of police behavior and response during these encounters.

2002 National Longitudinal Mortality Study

- The NLMS consists of a database developed for the purpose of studying the effects of demographic and socio-economic characteristics on differentials in U.S. mortality rates. The NLMS is based on a random sample of the non-institutionalized population of the United States. It consists of U.S. Census Bureau data from Current Population Surveys, Annual Social and Economic Supplements and a subset of the 1980 Census combined with death certificate information to identify mortality status and cause of death. The study currently consists of approximately 3.8 million records with over 550,000 identified mortality cases. The content of the socio-economic variables available offers researchers the potential to answer questions on mortality differentials for a variety of important socio-economic and demographic subgroups not covered as extensively in other databases.
